1 ZSwitchs

Arduino Lib for buttons and switches with ros.

The main advantage is to manage up to 32 button on 1 ros message uint_32.

This basic code is :

```
ZSwitchs switches; void setup() { switches.setup(&nh,"r1/pilo/switches"); switches.attach(P_ANA1.Pin.IO0);// attach the pin to bit 0 switches.attach(P_ANA1.Pin.IO1);// attach the pin to bit 1 //... up to 32 pin before to instanciate an other class. switches.setRefreshRateUs(1000);// refresh each milli second }

void loop() { switches.loop();//publish topic if needed

}
```

on ros you can do roscore & rosrn rosserial_python serial_node.py /dev/ttyS4 rostopic info "/r1/pilo/switches" rostopic echo "/r1/pilo/switches" rostopic hz rostopic info "/r1/pilo/switches"

so you get a message at refresh rate, and on edge. see refman.pdf for advance doc.

2 Data Structure Index

2.1 Data Structures

Here are the data structures with brief descriptions:

[ZSwitchs](#) 2

3 File Index

3.1 File List

Here is a list of all files with brief descriptions:

[ZSwitchs.cpp](#) 4

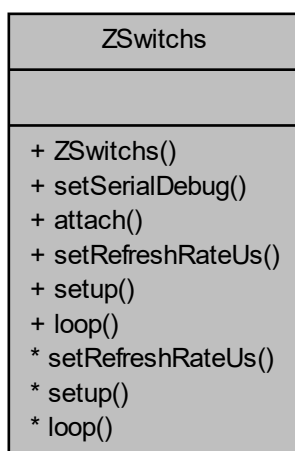

[ZSwitchs.h](#) 6

4 Data Structure Documentation

4.1 ZSwitchs Class Reference

```
#include <ZSwitchs.h>
```

Collaboration diagram for ZSwitchs:

Public Member Functions

- [ZSwitchs](#) ()
- void [setSerialDebug](#) (HardwareSerial *SerialDebug)
- int [attach](#) (uint32_t buttonPin)

- void [setRefreshRateUs](#) (uint32_t intervalTime)

ROS IPA

- void [setup](#) (ros::NodeHandle *myNodeHandle, const char *topic)
- void [loop](#) ()

4.1.1 Detailed Description

Definition at line 24 of file ZSwitchs.h.

4.1.2 Constructor & Destructor Documentation

4.1.2.1 ZSwitchs()

```
ZSwitchs::ZSwitchs ( )
```

constructor

create the object. The default refresh rate 10 hz. you have to call [setup\(\)](#) once to use it.

Definition at line 23 of file ZSwitchs.cpp.

4.1.3 Member Function Documentation

4.1.3.1 attach()

```
int ZSwitchs::attach (
    uint32_t buttonPin )
```

4.1.3.2 loop()

```
void ZSwitchs::loop ( )
```

function to be called in your main loop.

4.1.3.3 setRefreshRateUs()

```
void ZSwitchs::setRefreshRateUs (
    uint32_t intervalTime )
```

setup the refresh rate of the topic speed

Parameters

<i>intervalTime</i>	duration between 2 topic in Micro Seconde
---------------------	---

4.1.3.4 setSerialDebug()

```
void ZSwitchs::setSerialDebug (
    HardwareSerial * mySerialDebug )
```

setup a debug channel to have output on serial the drawback it that it waste cpu cycle, and you an lost some tick but usefull for debug.

setup a serial channel to output some debug stuff.

Definition at line 41 of file ZSwitchs.cpp.

4.1.3.5 setup()

```
void ZSwitchs::setup (
    ros::NodeHandle * myNodeHandle,
    const char * topic )
```

the ros initialisation

Parameters

<i>myNodeHandle</i>	the ROS node handler
<i>topic</i>	the topic for position displayed in ROS

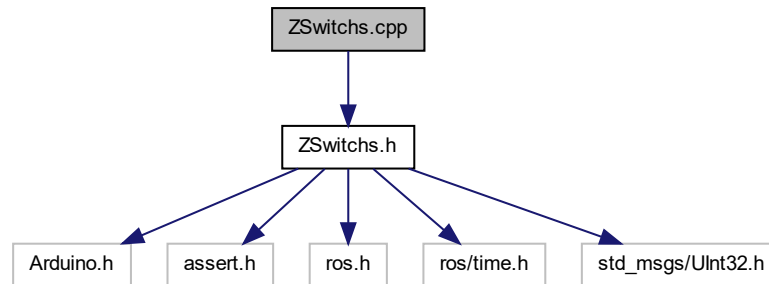

The documentation for this class was generated from the following files:

- [ZSwitchs.h](#)
- [ZSwitchs.cpp](#)

5 File Documentation**5.1 README.md File Reference****5.2 ZSwitchs.cpp File Reference**

```
#include <ZSwitchs.h>
```

Include dependency graph for ZSwitchs.cpp:

Macros

- `#define DEBUG(a) {}`

5.2.1 Detailed Description

This class is use to create ros topic that monitor button/switches.

This library is mainly agnostic regarding arduino architecture it should work on all. if `HardwareSerial` class is missing, create `HardwareSerial` that extend the `Serial` class. the following define must exist `ROS_USED`.

5.2.2 Macro Definition Documentation

5.2.2.1 DEBUG

```
#define DEBUG(  
    a ) {}
```

define to manage debug of lib

Definition at line 14 of file ZSwitchs.cpp.

5.3 ZSwitchs.h File Reference

```
#include <Arduino.h>
#include <assert.h>
#include <ros.h>
#include <ros/time.h>
#include <std_msgs/UInt32.h>
```

Include dependency graph for ZSwitchs.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- class [ZSwitchs](#)

Macros

- `#define` [ROS_USED](#) 1

5.3.1 Detailed Description

An library that manage switches(up to 32 by object/topic) and generate a ros topic `std_msgs/UInt32`.

5.3.2 Macro Definition Documentation

5.3.2.1 ROS_USED

```
#define ROS_USED 1
```

Definition at line 12 of file ZSwitchs.h.
